

RENDX

ADMIX

Description and use

RendX Admix is a salt resistant additive for render-based plasters. RendX Admix reduces the amount of water required for mixing and increases render density.

Where to use RendX Admix

RendX Admix should be used following damp proof course installation and where render-based plasters are applied to damp or salt contaminated walls.

Instruction for use

First render coat: 3 parts plastering sand to 1 part Portland cement. RendX Admix should be added to the mixing water at a ratio of 20 parts clean water to 1 part RendX Admix.

Second render coat: 4 parts plastering sand to 1 part Portland cement. RendX Admix should be added to the mixing water at a ratio of 20 parts water to 1 part RendX Admix. The second render coat should be applied once the first coat has set but not dried.

Finishing plaster: board finish or multi-finish.

Covers approximately 15m²

Safety information

Not hazardous product under normal use conditions. Wear gloves and goggles when mixing. In case of contact with eyes, wash out with water. Product and safety data sheets are available at www.dampexpert.com
